

## **Energy Consultant**

Work together with us and our clients from trade, services and industry on the sustainable improvement of their energy procurement and energy usage strategy.

We give you responsibility in the acquisition and proposal processes as well as in ongoing projects. Working independently in energy management consulting is as appealing for you as the complex team work in client projects.

You will support our clients in developing and implementing sourcing strategies for power and gas. Together with the client you will lead the bidding process, analyze the offers and conduct the necessary procurement negotiations. To round up your task, you will develop decision documents and final presentations that you will deliver to the client.

We offer a working environment of highly motivated consultants that is waiting for your support with thrilling client projects all over Germany and the rest of Europe. The management of the projects is happening centrally from Frankfurt am Main. You will work mostly at the client site or in our Frankfurt office.

### **Your profile as an offer to us**

You have a qualified degree in economics, business engineering or business informatics with above average grades and your major field of study was energy management

You have already work experience of 2-6 years in an electric utility and/or ideally in a consultancy with focus on power supply.

Your proactivity and team spirit round up your profile as well as your mobility and flexibility. Affinity towards acquisition and your interest in building own customer relationships are further characteristics.

You are analytically and conceptually strong and customer orientated.

You have profound MS-office knowledge and you can communicate in English and German spoken and written.

The best match to us is people who take on responsibilities and master complex tasks. Is this you? Then we should get to know one another desperately. We are looking forward to your application!
